

MEMORANDUM

To: Frank (c.c. WRC, AAM, BPC, JBL)

From: Dave

Subject: PDP-1d Usage *(effort to convert, where relevant)*

Date: March 2, 1973

-
- editing and assembling SUE code for the HSMIMP, crypto-box, etc.
(2 weeks - more to preserve interrupt portion)
 - listings (via the TIP line printer) (occasionally when both the TENEX and TIP printer are down, we list on multiple PDP-1d teletypes).
 - STRCOMP for small, quick, analytic stuff (TELCOMP is no substitute - nothing is) (1 year)
 - hacks
(almost infinite)
 - archival file storage
 - editing and assembling 516/316 code for the IMPs and TIPs and NCC
(2 weeks - more to preserve interrupt portion)
 - wire lists -- done on TENEX now
 - RUNOFF -- in some ways the PDP-1d version is better.
(1 week to add PDP-1d features to TENEX version)
 - TIP reloads*
 - network patching (automated)*
 - assorted data-management
(several years)
 - network summaries -- using STRCOMP and paper tape input
(4 weeks or more)
 - IMP and line outage data
(a little time for operators to learn to use 10 TECO)
 - IMP/TIP verifier -- verifies running IMP and TIP systems.*
 - receiving NCC data*
 - network DDT*φ
 - dump from net*φ
 - experimental Host work (gateways, etc.)*φ
 - IMP documentation (CRIB-SHEET-GENERATOR, etc.)
(4 weeks)
 - concurrence, interrupt listing, etc.
(4 to 6 weeks)
 - IMP testing*
 - IMLAC editing and assembly
(2 weeks unless one already exists)

*impossible to convert to TENEX with present TENEX restrictions
φnot done yet
